- First mover advantages
- Reliable supply thanks to safety stock and risk spreading

Key Materials

- Hemp
- Flax

Key Products

- Hemp / Flax fibre
- Non-wovens
- Hemp shives for animal bedding
- Hemp shives for construction

Company

HempFlax in Oude Pekela, the Netherlands, manufactures and processes durable raw materials, semi-finished products and end products made from ecologically cultivated fibre hemp and flax. With its professional approach to the development and innovation of recyclable natural fibre products, HempFlax is the first link in a sustainable industrial chain.

Material

This industrial production chain is a result of sustainable agriculture. Every year, HempFlax obtains new natural fibres, particularly fibre hemp, through contract cultivation with arable farmers in the Netherlands and Germany. By putting recyclable raw materials on the market, HempFlax has gained a leading position in this innovative industrial development. Its main objective is to produce recyclable raw materials for industrial end products and commodities for the consumer market.

HempFlax gives entrepreneurs and consumers the opportunity to give substance to their responsibility for the environment. The sustainable chain functions according to the universal environmental thinking and awareness of right-minded people aimed at continuing the ecological circle as long as possible. Entrepreneurs, managers, banks and consumers should make an effort to use the possibilities afforded by HempFlax.

Products

With its vision and innovative decisiveness, HempFlax in the Netherlands and Germany gives meaning to the term agrification. By providing recyclable raw materials, environmentally harmful synthetic fibres made of fossil raw materials – such as nylon and plastics – can be replaced by fibres made of recyclable raw materials.

Product	Year capacity
Bulkfiber Hemp	1,600 metric ton
Bulkfiber Flax	1,000 metric ton
Hemp/Flax shives	5,000 metric ton
Hempfiber non-wovens	
Hemp insulation material
